Directi	ons (21-30) Read the following passage carefully and answer the questions given below it. Some words are given
in bold	so that you can locate them easily while answering some of the questions.
	The arguments in favour of FDI in Defence are familiar. First, public sector companies in Defence, Research and Development and allied industries have concistently failed to meet the requirements of the armed forces, especially given the global revolution in military technology. Second, the superior management culture of the private sector will ensure better adherence to budgets and timelines. Third, the country is compelled into repeated imports without any technology transfer (despite contractual obligations) because the military is always urgently in need of the arms and equipments. Therefore, the argument goes, encouraging foreign companies to invest in Indian defence and set up industries here will mean that money will be spent within the country, generating jobs and bringing in new know-how, with the possibility of exports.
	In my opinion, none of these arguments address the specific and unique needs of the defence sector in India. Whatever else these measures might achieve, they will not help accomplish what must surely be the main goal, namely to build self-reliance in advanced military technology and reduce India's debilitating dependence on foreign suppliers in the area of national security. The FDI inflow itself tells a tale. All the liberalized provisions since 2001 have led to a meager inflow of only \$4.8 billion, in an overall FDI inflow of around \$334 billion. It may be argued that it is too early to judge, but there are actually good reasons why defence companies do not and will not find FDI in another country attractive, and why there are few such examples across the world.

FDI means a long-term presence in India, and good returns on investment are possible only if repeat orders or contracts for newer models are assured. But, unlike cars or white goods, that will not always happen in military equipment. There may be gaps of many years or even decades between orders. For instance, India bought the Mirage 2000 in the 1980s and has clinched the Rafale deal this year, both from Dassault of France. In France itself, however, Dassault is reasonably assured of continuous business from regular domestic and European orders, as well as from staggered exports. Foreign subsidiaries or substantial FDI will, thus, always put pressure on India for repeat orders. Would dependence on a Lockheed Martin (India) or a Bharat Boeing be really very different from dependence on the U.S. principals? Yes, more of India's money will be spent in India rather than in other countries. But, the Defence Procurement Policy anyway mandates 30 per cent offsets (50 per cent in high-value contracts). In other words, the supplier must spend 30 per cent of the contracted value within India through local manufacture and services. On the other hand, even if manufacture were by an Indian subsidiary, some specialized technology or components will always need to be imported. As is the case in car manufacture by Korean or Japanese subsidiaries in India, where numerous models that sell in smaller volumes are only assembled in India with imported components. FDI may, therefore, not be so different from offsets in terms of local manufacture, jobs, or money spent.
